```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          34 ; Search time 425.19 Seconds

A DNA sequence (748239) codes for the alpha-7 subunit (W09025) of the human neuronal nicotinic acetylcholine receptor (nAChR). Host cells, esp. mammalian cells or amphibian ocytes, carrying alpha-7 subunit nucleic acids, opt. in combination with other alpha and/or beta recombinant nAChR subunits useful for identifying cpds. that modulate the activity of human nAChRs.

pr activity of the receptor
pr Claim 8; page 78-79; 99pp; English.
CC The present sequence encodes a human neuronal nicotinic acetylcholine
CC The present sequence encodes a human neuronal nicotinic acetylcholine
CC RACHR Subunit The cells expressing the alpha and/or beta
CC RACHR Subunits may be used in a method of screening compounds to
CC Identify any which modulate the activity of human neuronal NACHR.
CC Identify any which modulate the activity of numan neuronal NACHR.
CC Identify any which modulate the activity of numan vs diseased brain
CC and expression density of various subunits in normal vs diseased brain
CC subunit specific antibodies may be used to monitor the distribution
CC subunit specific antibodies may be used to monitor the creeptor
CC subunit combinations with a variety of potential agonists or antagonists
CC individual subunits and should lead to the identification and design of
CC individual subunits and should lead to the identification and design of
CC compounds that are capable of very specific interaction with one or
CC more receptor subtypes. The resulting drugs should exhibit fewer
CC unwanted side effects than drugs identified e.g. screening with cells
CC that express a variety of subtypes.

Figure 2A-B; 18pp; English.

CC 2cDNA clones (T59196 and T59197) respectively code for the alphal cc subunit (W12368) and alpha2 subunit (W12369) of chick neuronal cc subunit (W12368) and alpha2 subunit (W12369). They were isolated from CC alpha-bungarotoxin binding protein (ABBP). They were isolated from CC alpha-bungarotoxin binding protein (ABBP). They were isolated from CC alpha-bungarotoxin binding protein (ABBP). They were isolated from CC and the N-terminal amino acid sequence of chicken r9198) based on the N-terminal amino acid sequence of chicken cc ancoded the N-terminal portion of alpha1. A subclone, pCh29-3 cc encoded the N-terminal portion of alpha1. A subclone, pCh29-3 cc (ATCC 40641), was used to rescreen the library, yielding clone pCh31-1 (ATCC 40640), which encoded the entire alpha2 sequence. CC clone pCh31-1 (ATCC 40639), encoding the C-terminal portion of clones to ldentify further CC alpha1. The cDNA clones can be used as probes to identify further CC alpha1. The cDNA clones can be used as probes to identify further CC alpha1. The cDNA clones can be used as probes to dentify further CC alpha the C-terminal produm of ABBP.

PP Nucleic acids encoding nicotinic accept.

PT Nucleic acids encoding nicotinic accept.

PT used in screening to determine the effect of drugs on the inverse process of the sequence (T48237) codes for the alpha-4 subunit (W09023) of the human neuronal nicotinic acetylcholine receptor (naCha). Host cells, esp. mammalian cells or amphibian occytes, carrying alpha-4 cucleic acids, opt. in combination with other alpha and/or beta combinant nachar subunits useful for identifying cpds. that combinate the activity of human nachas.

CC modulate the activity of human nachas.

CC modulate acids BP; 590 A; 1215 C; 1084 G; 606 T;
                                                                                                                                                                                                                                                                                                                                                                                                    RESULT

fragment used in diagnosis of autosomal dominant nocturnal front

T lobe epilepsy

Claim 6; Fig 13; 20pp; English.

The DNA sequence of the normal nAChR is given in T59527,

the DNA sequence of the ADNFLE-inducing mutant is given in T59528.

Mutations at codon 248, which have the effect of replacing

serine by another amino acid (e.g. phenylalanine) in the sixth

c smino acid of the transmembrane domain 2 (M2) of the alpha4

subunit of nAChR have been found to be associated with ADNFLE.

The primers given in T59529 and T59530 were used in the

sequence 2082 BP; 367 A; 767 C; 592 G; 356 T;

```
The present sequence encodes a human neuronal nicotinic acetylcholine creeptor (NAChR) subunit. The cells expressing the alpha and/or beta creeptor (NAChR) subunit and a method of screening compounds to NAChR subunits may be used in a method of screening compounds to compound the identify any which modulate the activity of human neuronal NAChR. CC subunit specific antibodies may be used to monitor the distribution cc and expression density of various subunits in normal vs diseased brain cc and expression density of various subunits or specific receptor cc tissues. Testing of single receptor subunits or specific receptor subunits or antagonists or subunit combinations with a variety of potential agonists or antagonists cc provides information with respect to the function and activity of the cc provides information with respect to the function and activity of the cc provides information with respect to the interaction with one or cc compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds that are capable of very specific interaction with one or compounds tha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ğ

with nematode resistance, Declared by genetic analysis to a region chromosome (BAC). Mi was localised by genetic analysis to this cof the tomato genome of about 65 kb. DNA corresponding to this cegion was cloned into BAC vectors. Sequence analysis of a 52 kb coresion was cloned into BAC vectors. Sequence analysis of probably a pseudogene. By RNA blot analysis, transcripts of probably a pseudogene. By RNA blot analysis, transcripts of copy contained by 4 kb corresponding to copy 1 and copy 2 were found in the copy and copy 2 were found in copy contained by 4 kb corresponding to copy 1 and copy 2 (see copy full-length transcripts of copy 1 (see v26082) and copy 2 (see copy full-length transcripts of copy 1 (see v26082) and copy 2 (see copy full-length transcripts of copy 1 (see v26082) and copy 2 (see copy 1) identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 1 identical and contain structural features similar to known copy 2 identical structural features similar to known copy 2 identical structural features similar to known copy 2 identical and copy 2 identical structural features similar to known copy 2 identical structural features similar to known copy 2 identical and copy 2 identical structural features similar levels to the similar copy 2 identical structural features identical structural features identical structural features similar levels to the similar copy 2 identical structural features identical structura

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Neuronal nicotinic acetylcholine receptor alpha-2 subunit DNA.
Neuronal nicotinic acetylcholine receptor; nAChR; neurotransmitter;
ligand-gated receptor; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    insert of one clone obtd. was ligated with the insert of another clone to generate a full-length alpha 2 subunit cDNA. The DNA can be used to identify function nNAChRs. Cells contg. the DNA can be used nNAChRs. The human nNAChR alpha 2 subunit can be used to product the nucleic acids can be used in immunohistochemistry, diagnosis and and creating animal models.

PT Human aspartic protease and related DNA - which may be involved in PT processing of endothelin and pro-opiomelanocortin pro-hormone(s)  
CC Interest Sequence represents a partial cDNA sequence from a human  
CC espartic protease, isolated from a cDNA library of human origin. The  
CC espartic protease. Isolated from a cDNA library of human origin. The  
CC from human cDNA libraries having partial DNA sequences and also ESTs  
CC espartic protease. Compounds which inhibit aspartic proteases an  
CC espartic protease. Compounds which inhibit aspartic protease, especially  
CC used in therapy where needed. Important functions of aspartic proteases  
CC are the processing of endothelin and pro-opiomelanocortin prohormones.  
CC They may also be involved in the processing of serum amyloid A protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC The present sequence encodes a human neuronal nicotinic acetylcholine CC receptor (NAChR) subunit. The cells expressing the alpha and/or beta CC NAChR subunits may be used in a method of screening compounds to CC identify any which modulate the activity of human neuronal NAChR. CC and expression density of various subunits in normal vs diseased brain CC subunit specific antibodies may be used to monitor the distribution CC subunit combinations with a variety of potential specific receptor CC provides information with respect to the function and activity of the CC individual subunits and should lead to the identification and design of CC compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting drugs should exhibit fewer CC unwanted side effects than drugs identified e.g. screening with cells SQ Sequence 2277 Bp; 451 A; 695 C; 643 G; 486 T;

                                                                                                                                                                                                                                                                                                                                                            processing of endothelin and pro-optomelanocortin pro-hormone(5)

The present sequence encodes a human aspartic proteases and also ESTs from invention describes novel human aspartic proteases which encodes an invention contains a having partial DNA sequences which encodes an also be aspartic protease. Compounds which inhibit aspartic protease, especially human cDNA libraries having partial therapy where needed. The protease can also be antibodies can be used in therapy where needed. The protease can also be antibodies can be used in therapy where needed. The protease can be used in therapy where needed. The protease can be used in therapy where needed. The protease can be used in the processing of aspartic proteases are the processing of endothelin and pro-optomelanocortin prohomones.

They may also be involved in the processing of serum amyloid A protein. They may also be involved in the processing of serum amyloid A protein.

FI Human aspartic protease and related DNA - which may be involved in processing of endothelin and pro-opiomelanocortin pro-hormone(s) processing of endothelin and pro-opiomelanocortin pro-tease and also ESTs can thousan object and therapy where needed. The protease can also be aspartic protease. Compounds which inhibit aspartic protease can also be aspartic protease. Compounds which inhibit aspartic protease can also be aspartic protease. Sepecially cased in therapy where needed. The protease can also be antibodies can be used in therapy where needed. The protease can also be used in therapy where needed. The protease can the processing of endothelin and pro-opiomelanocortin prohormones. They may also be involved in the processing of serum amyloid a protein. Sequence 452 BP; 81 A; 109 C; 137 G; 114 T;

double-stranded CDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 53. Library constructed by Bento Soares and M.Fatima Bonaldo. The adult brain RNA was provided by Dr. Donald H. Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of a
